Team 4 project documentation

About the project

Our team was assigned to create a simulation of Udemy website using WordPress content management system (CMS)

So we came up with a website that aims to perform almost like Udemy and obtain an easy user experience

what is the Udemy website is all about?

Udemy is an online learning and teaching marketplace with over 213000 courses and 57 million students. It is the virtual space where you showcase your courses, and your online customers make their selections. Your website acts as the classes, sales staff, and cash register of your online business channel.

What is the technology and methods used in this website?

- WordPress
- HTML
- CSS

Introduction

This documentation guides you through the main features of the site and guides you how to use and customize.

Although every effort has been made to ensure the site is bug free and easy to use there is always a chance errors may occur. If you do find a problem please notify us immediately through our support tab so we can ensure it gets fixed as quickly as possible.

Need Help ?

Please do not hesitate to get in touch with us if you need help. We also welcome your feedback and suggestions. Please contact us through the **Support Tab** available in our site page at Link blow :

<https://dev-udemynew.pantheonsite.io/>

We usually respond to all queries within 24 hours during weekdays. We are not available during weekends and public holidays. We live across different timezones and have different people for answering different queries. So if we find us online responding to other comments and not yours please be patient with us.

Installation

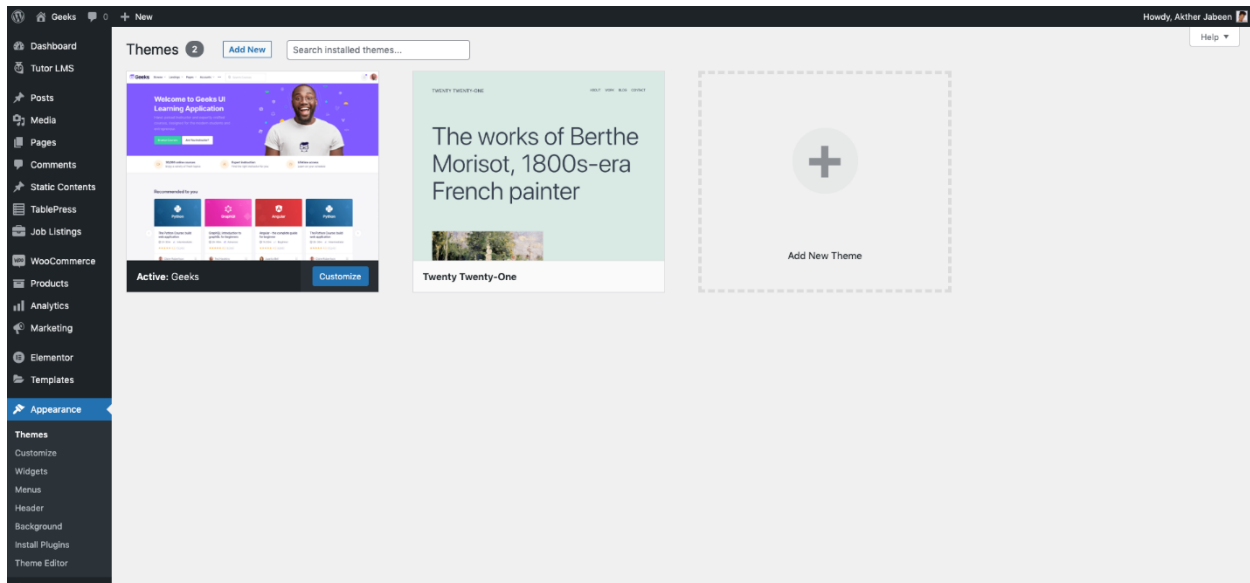

Install Required Plugins

On activation, the above plugins list is prompted by the theme and site to be installed. You can click on **Install Plugins** link or install it from **Appearance > Install Plugins**. After installation, select all the plugins and click on activate to activate all the plugins.

Install the theme

Once you've "Save Changes", you should now see all your WordPress themes and plugins listed. Here is a sample screenshot :

You can now simply click on the "Install" button to install the theme. You can now view the installed theme in **Appearance > Themes** page.

Plugins recommended on activation

Recommended Plugins

Once you've installed **Geeks** theme. You need to activate it. On activation, the theme recommends a set of plugins to be installed to make the best use of the theme.

The List

- **Elementor** – Introducing a WordPress website builder, with no limits of design. A website builder that delivers high-end page designs and advanced capabilities, never before seen on WordPress.
- **Geeks Elementor** – Extends core Elementor with additional widgets, skins and extension of existing widgets.
- **Geeks Extensions** – Provides custom post type for Portfolio.
- **MAS Static Content** – Create reusable static blocks that can be plugged into any page.
- **One Click Demo Import** – Provides an easy to use page to install various demos that the theme offers with just one click.
- **Safe SVG** – This plugin is commonly used by websites and brands to display logos and icons on their websites.
- **Advanced Custom Fields** – This plugin helps to add fields on all over WP including posts, users, taxonomy terms, media, comments and even custom options pages!
- **Tutor** – This is one of the best WordPress LMS Plugins which can be used to easily create & sell courses online.
- **WooCommerce** – **WooCommerce** is a powerful, extendable eCommerce plugin that helps you sell anything. Beautifully. This is used to generate Shop and shop related pages.
- **WPForms Lite** – This plugin provides contact form and various other forms feature used in our theme.
- **WP Job Manager** – WP Job Manager is a lightweight job listing plugin for adding job-board like functionality to your WordPress site.

The List of Plugins Used in the Site

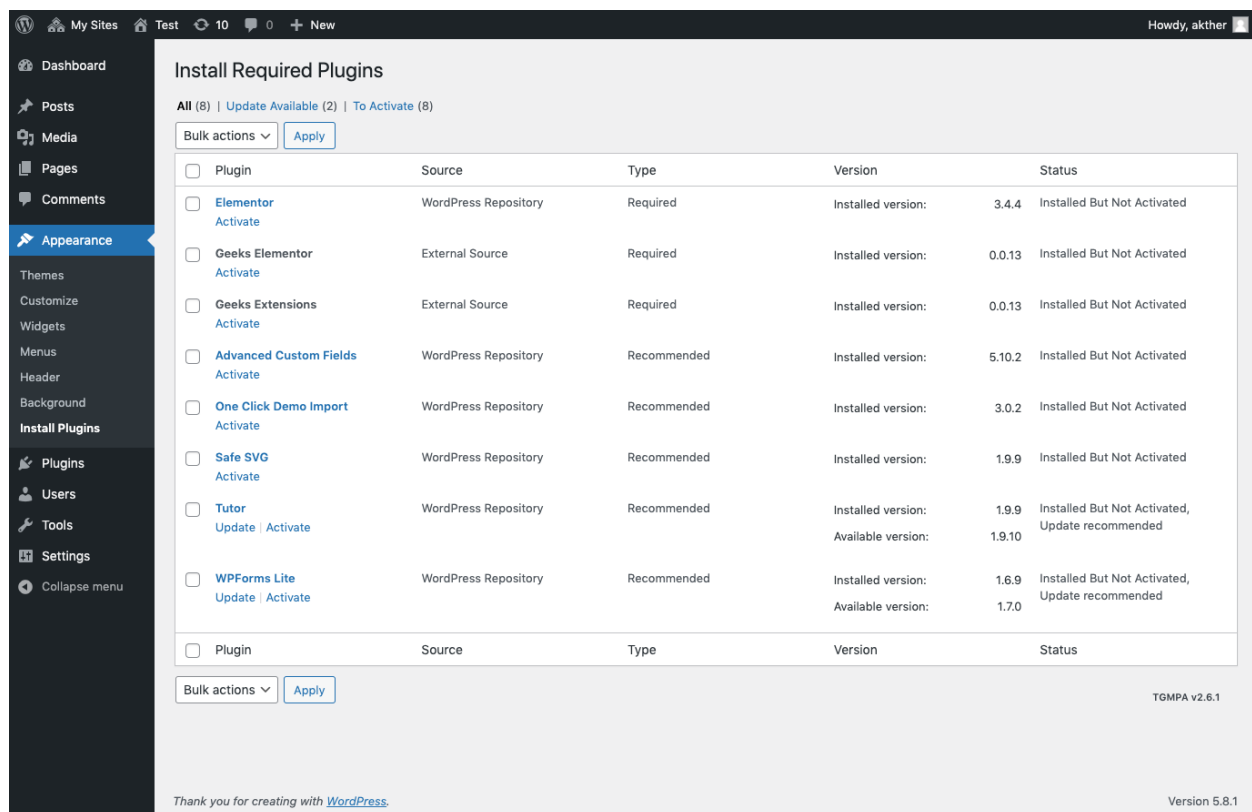

- **Advanced Custom Fields** – Customize WordPress with powerful, professional and intuitive fields.
- **Akismet Anti-Spam** – Used by millions, Akismet is quite possibly the best way in the world to protect your blog from spam. It keeps your site protected even while you sleep. To get started, just go to your Akismet Settings page to set up your API key.

- **All in One SEO** – SEO for WordPress. Features like XML Sitemaps, SEO for custom post types, SEO for blogs, business sites, ecommerce sites, and much more. More than 100 million downloads since 2007.
- **All-in-One WP Migration File Extension** – Extension for All-in-One WP Migration that enables using import from file .
- **All-in-One WP Migration With Import** – Migration tool for all your blog data. Import or Export your blog content with a single click.
- **Elementor Header & Footer Builder** – his powerful plugin allows creating a custom header, footer with Elementor and display them on selected locations. You can also create custom Elementor blocks and place them anywhere on the website with a shortcode.
- **Elementor Pro** – Elevate your designs and unlock the full power of Elementor. Gain access to dozens of Pro widgets and kits, Theme Builder, Pop Ups, Forms and WooCommerce building capabilities.
- **ElementsKit Lite** – The most advanced addons for Elementor with tons of widgets, Header builder, Footer builder, Mega menu builder, layout pack and powerful custom controls.
- **Jetpack** – Security, performance, and marketing tools made by WordPress experts. Jetpack keeps your site protected so you can focus on more important things.
- **Menu Icons** – Spice up your navigation menus with pretty icons, easily.
- **One Click Demo Import** – Import your content, widgets and theme settings with one click. Theme authors! Enable simple demo import for your theme demo data.
- **Shortcoder** – Shortcoder plugin allows to create a custom shortcodes for HTML, JavaScript and other snippets. Now the shortcodes can be used in posts/pages and the snippet will be replaced in place.
- **TablePress** – Embed beautiful and feature-rich tables into your posts and pages, without having to write code.
- **TranslatePress – Business** – Experience a better way of translating your WordPress site using a visual front-end translation editor, with full support for WooCommerce and site builders.
- **TranslatePress – Multilingual** – Experience a better way of translating your WordPress site using a visual front-end translation editor, with full support for WooCommerce and site builders.
- **Tutor LMS** – Tutor is a complete solution for creating a Learning Management System in WordPress way. It can help you to create small to large scale online education site very conveniently. Power features like report, certificate, course preview, private file sharing make Tutor a robust plugin for any educational institutes.
- **Tutor LMS Elementor Addons** – Elementor Addons Integration - Tutor LMS plugin lets you design course pages with Elementor.
- **Tutor LMS Pro** – Power up Tutor LMS plugins by Tutor Pro.
- **Ultimate Member** – The easiest way to create powerful online communities and beautiful user profiles with WordPress.
- **Unlimited Elements for Elementor** – Unlimited Elements - Huge Widgets Pack for Elementor Website Builder, with html/css/js widget creator and editor.

- **Visibility Logic for Elementor** – Hide or show Elementor widgets based on conditions.
- **WooCommerce** – An eCommerce toolkit that helps you sell anything. Beautifully.
- **WooCommerce Multilingual & Multicurrency** – Make your store multilingual and enable multiple currencies.
- **WooCommerce PayPal Payments** – PayPal's latest complete payments processing solution. Accept PayPal, Pay Later, credit/debit cards, alternative digital wallets local payment types and bank accounts. Turn on only PayPal options or process a full suite of payment methods. Enable global transaction with extensive currency and country coverage.
- **WP Job Manager** – Manage job listings from the WordPress admin panel, and allow users to post jobs directly to your site.

Install Required Plugins

On activation, the above plugins list is prompted by the theme to be installed. You can click on **Install Plugins** link or install it from **Appearance > Install Plugins**. After installation, select all the plugins and click on activate to activate all the plugins.

Version 5.8.1

Install Required Plugins screen

Demo Content

After installation and activation of the theme and required plugins. You can now install the demo content to get you started.

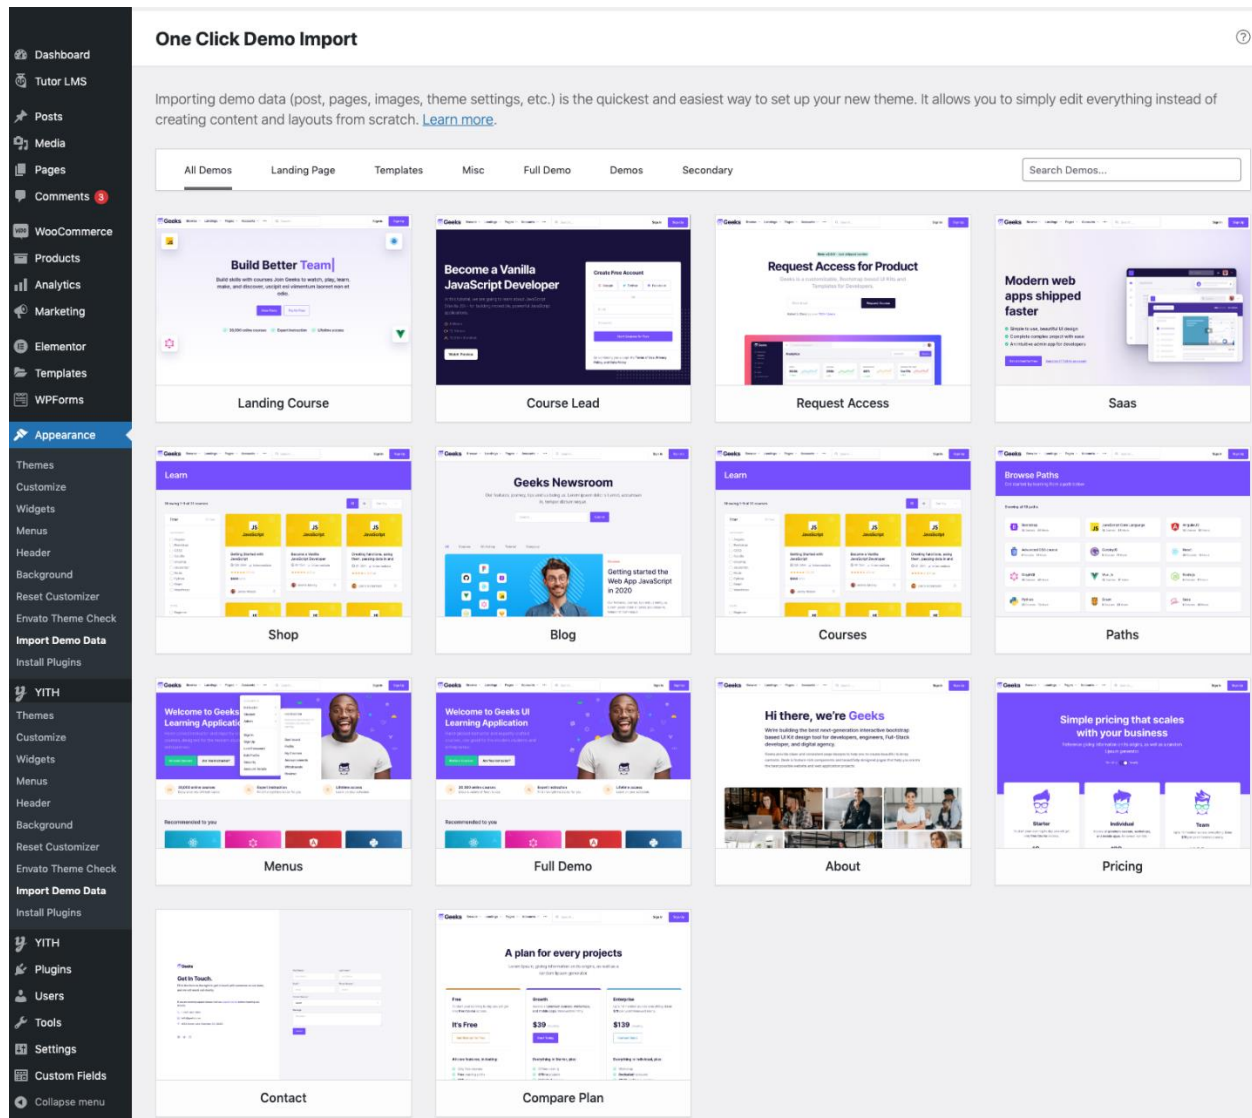

Geeks has 17 demo content in total that can be imported. Importing demo content does not delete any existing content. It also imports WPForms.

Importing demo data (post, pages, images, theme settings, ...) is the easiest way to setup your theme. It will allow you to quickly edit everything instead of creating content from scratch.

Before Import

Please make sure that all the required plugins are installed and activated.

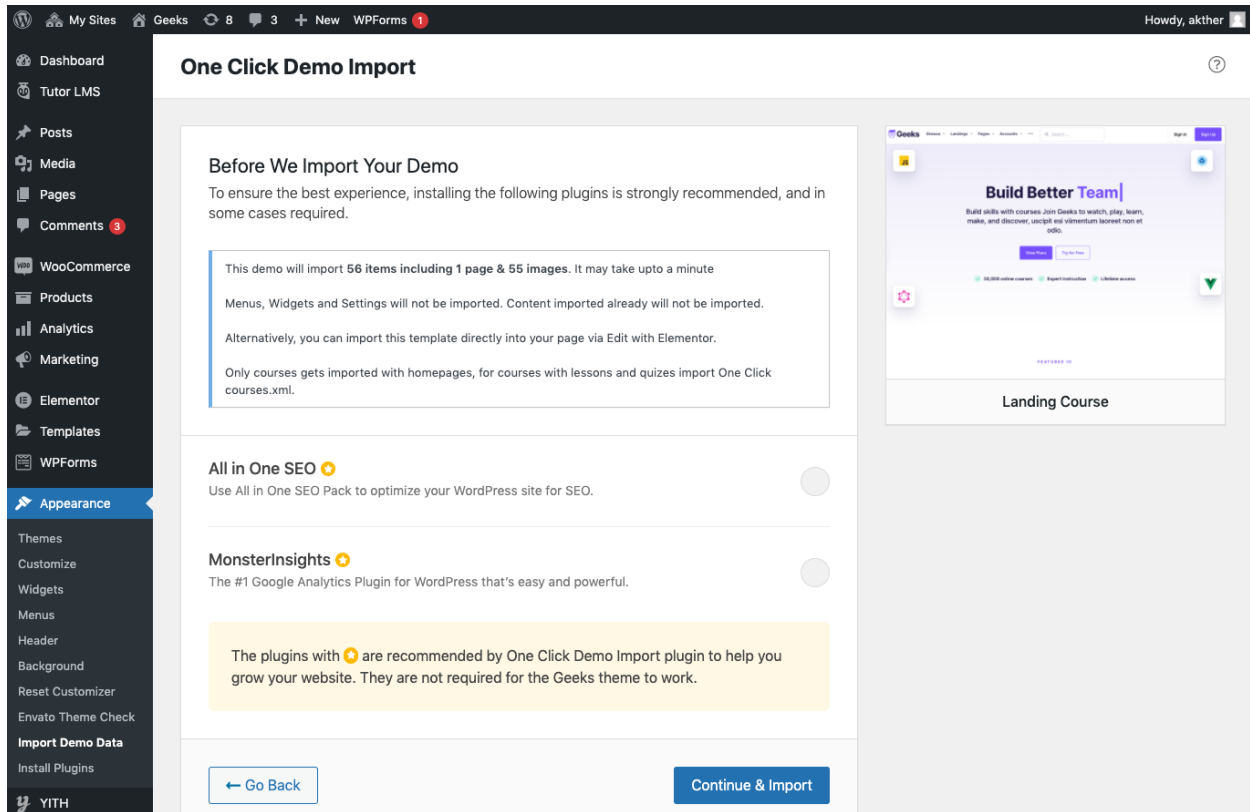

- No existing posts, pages, categories, images, custom post types or any other data will be deleted or modified.
- Posts, pages, Courses, Events, images, widgets, menus and other theme settings will get imported.
- Please click on the Import button only once and wait, it can take a couple of minutes.

Import Demo Data screen

Choose a demo

You can choose on of the available demos. On selecting import the import button a dialog box appears informing you about what exactly is imported.

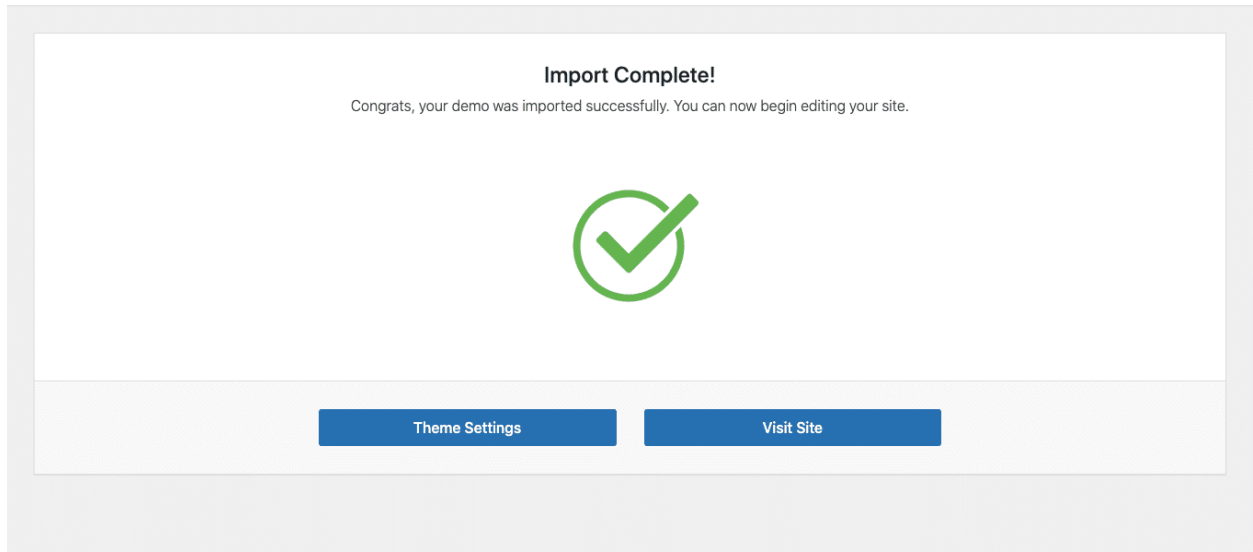

Import data confirmation dialog box

On confirmation, the importer will import the content specified. It may take 2-3 minutes to import all the demo content.

Menus, widgets and settings will not be imported. Content already imported will not be imported again.

Import Complete

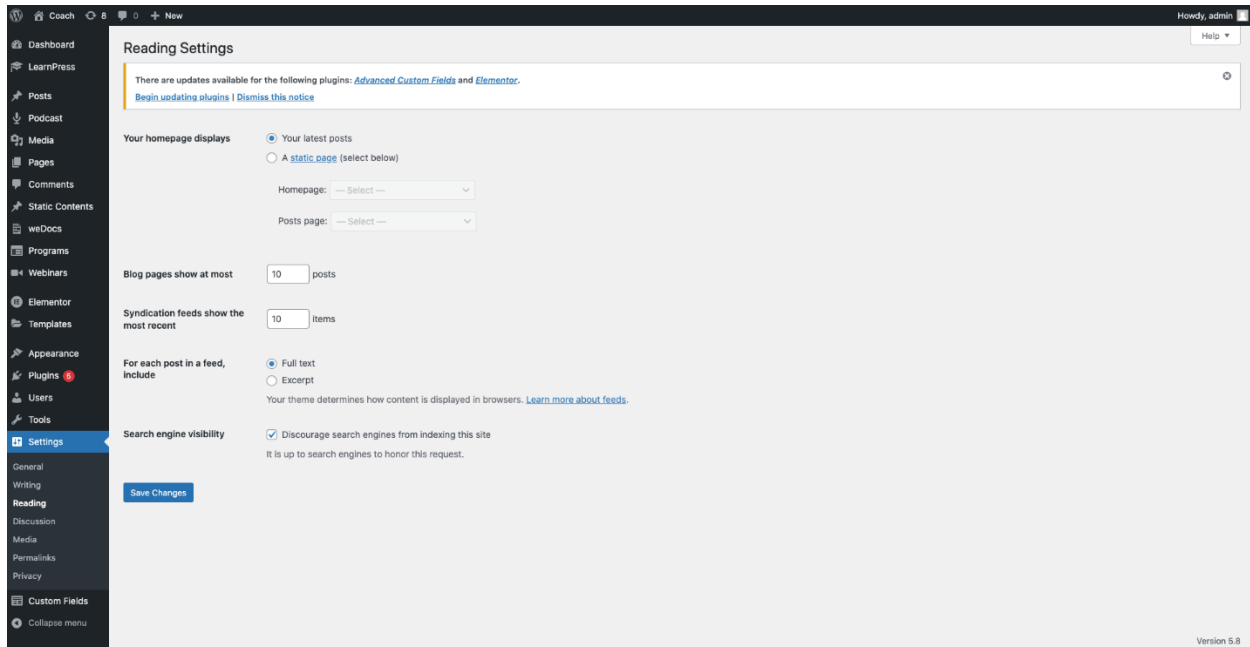

Import Complete

After import, you'll be notified about the import completion.

Setting a homepage

After import is completed, you can set one of the pages imported as your homepage. To set your home page:

- In your admin panel, go to **Settings > Reading**
- Select **A Static Page** option for the **Your homepage displays** option.
- In the dropdown, choose the page you want set as home.

Setting Home

Updating Plugins

Automatic Update

WordPress allows you to enable automatic updates for your plugins to keep your website secure and up-to-date. Here are the steps to enable automatic updates for plugins in WordPress:

Log in to your WordPress dashboard and navigate to the "Plugins" menu.

Find the plugin you want to enable automatic updates for and click on "View Details."

On the plugin details page, you should see a section labeled "Advanced." Click on the "Advanced" tab.

Under the "Automatic Updates" section, select the option that you prefer. You can choose from "Enable automatic updates for major releases," "Enable automatic updates for minor releases," or "Enable automatic updates for both major and minor releases."

Click on the "Save Changes" button to apply the changes.

Note that enabling automatic updates for plugins can be a security risk if the plugins are not well-coded or if there are compatibility issues with your website. It's always a good practice to regularly check your website after an update to make sure that everything is functioning as expected.

Also, some hosting providers or server configurations might limit the availability of automatic updates for plugins. If you encounter any issues, you might need to check with your hosting provider or web developer to ensure that automatic updates are enabled on your website.

Semi-automatic update

Semi-automatic updates for plugins in WordPress allow you to control when and which plugins are updated while still reducing the risk of security vulnerabilities due to outdated plugins. Here are the steps to perform a semi-automatic update for plugins in WordPress:

Log in to your WordPress dashboard and navigate to the "Plugins" menu.

Check the list of installed plugins and identify which ones need updating. You can sort the plugins by the "Last Updated" column to easily find the ones that haven't been updated in a while.

Deactivate the plugin you want to update. This will prevent any conflicts or issues during the update process.

Download the latest version of the plugin from the WordPress plugin repository or from the plugin developer's website.

Once the plugin is downloaded, unzip the file and replace the old plugin files with the new ones using an FTP client or a file manager provided by your hosting provider.

Activate the plugin again and check that everything is working correctly.

Note that semi-automatic updates require manual intervention, but they still reduce the risk of security vulnerabilities caused by outdated plugins. You should always test the updated plugins on a staging environment or a local development environment before applying the changes to a live website to ensure that there are no conflicts or issues. Additionally, some plugins might have their own update procedures or require different steps to update, so be sure to check the plugin documentation or contact the developer if you have any questions.

Manual Update

Manually updating WordPress plugins is a more time-consuming process, but it provides complete control over the update process and ensures that there are no conflicts or issues during the update. Here are the steps to manually update a plugin in WordPress:

Log in to your WordPress dashboard and navigate to the "Plugins" menu.

Check the list of installed plugins and identify which ones need updating. You can sort the plugins by the "Last Updated" column to easily find the ones that haven't been updated in a while.

Deactivate the plugin you want to update. This will prevent any conflicts or issues during the update process.

Download the latest version of the plugin from the WordPress plugin repository or from the plugin developer's website.

Once the plugin is downloaded, unzip the file and replace the old plugin files with the new ones using an FTP client or a file manager provided by your hosting provider.

Ensure that the new files are placed in the correct location. The plugin files should be placed in the `/wp-content/plugins/` directory.

Activate the plugin again and check that everything is working correctly.

Note that manually updating plugins requires technical skills and can be risky if not done correctly. Before performing any updates, it's recommended to take a backup of your website and test the updated plugin on a staging environment or a local development environment to ensure that there are no conflicts or issues. Additionally, some plugins might have their own update procedures or require different steps to update, so be sure to check the plugin documentation or contact the developer if you have any questions.

Changelog

Overall, a well-maintained changelog can help users understand what has changed and improved in a website, and can help developers keep track of version updates.

We Have been Update the site consistently over time all included in Plugin All-in-One WP Migration > Backups “ over 2 months “

Logo

Logo is part of the header and your site identity.

Customizer

To upload your own logo, you can do it from WordPress Customizer. To access customizer, please navigate to **Appearance > Customize > Site Identity > Logo** in your WP Admin.

SVG Logo

We recommend using a SVG logo for best experience in all types of screens including the Retina.

By default, WordPress does not allow SVG files to be uploaded for security purposes. You need to use a plugin like **Safe SVG** to upload your SVG logo safely.

Dimensions

The dimensions of the logo used in our demo is 92×28 pixels.

Navigation

Menus are part of the header and help you in navigating through various pages of your WordPress website. You can create and manage menus from **Appearance > Menus**.

Menu Locations

4 menu locations to which you can place your menu and they are:

1. Navbar Menu
2. Footer Menu
3. Social Menu
4. Blog Categories Menu

Navbar Menu

The navbar menu is part of the header and is the primary navigation area. In this menu location, you can have menus of any depth as well as advanced features like megamenu, descriptions, etc.

Footer Menu

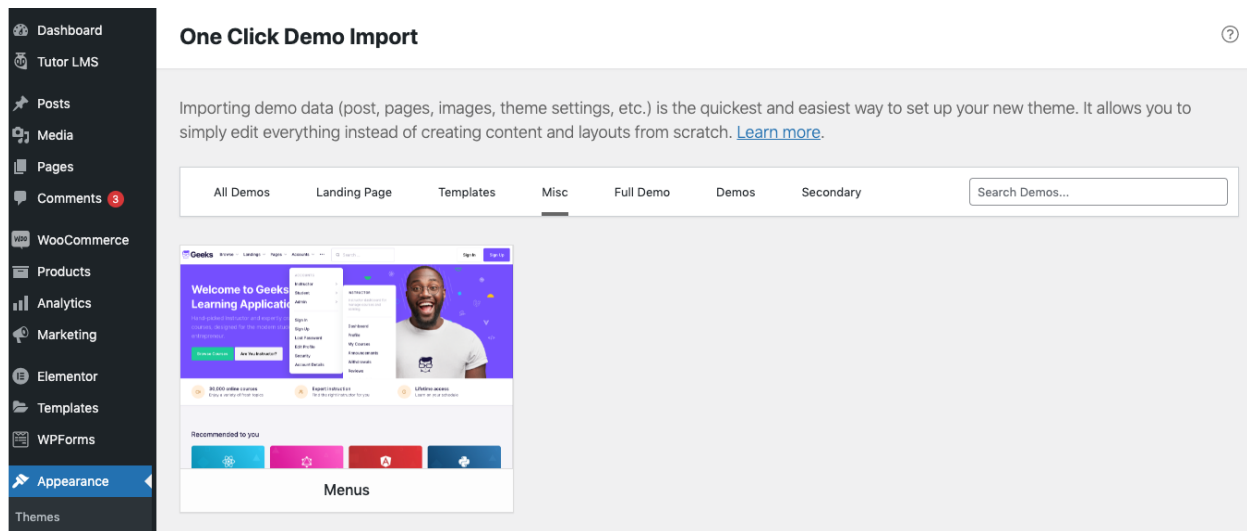

Footer menu is the menu display on the right side of the copyright text.

Blog Categories Menu

Blog Categories menu is the menu display on the top of the blog page in Fullwidth Layout.

Importing Menus

You can also import demo menus from **Appearance > Import Demo Data > Misc > Menus** to import the two menus used.

Using one click demo import to import menus

Page Options

You can set header for individual **pages** and **posts** via **Elementor** page options.

via Elementor

To set the Header for an individual Page/Post via Elementor please follow the instructions given here:

Open the page or post you want to set a header for in the WordPress dashboard.

Click on the "Edit with Elementor" button to open the page or post in Elementor.

Once the page or post is loaded in Elementor, click on the "Edit Section" icon for the section you want to set the header for. The section will be highlighted with a blue border.

In the Elementor sidebar panel, click on the "Advanced" tab.

Under the "Advanced" tab, you should see a section labeled "Custom CSS."

Click on the "Custom CSS" dropdown menu.

From the dropdown menu, select "Heading" to set a custom header for the section.

Once you've selected "Heading," you can enter your custom header text in the "Heading HTML Tag" field. You can also choose the size, font, color, and other styling options for the header.

Click on the "Update" button to save your changes.

Note that the exact steps and options may vary depending on your Elementor version and theme settings. Additionally, some themes may have their own header settings or options, so be sure to check the theme documentation or contact the developer if you have any questions.

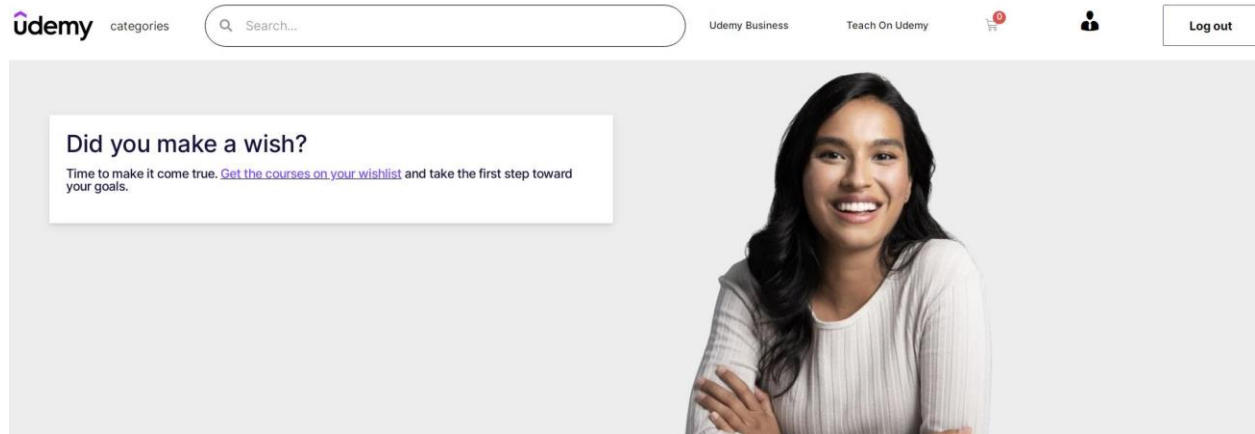

Setup

Home

Udemy Homepage is built using **3 Elementor widgets**.

Footer

Widget Area

The footer is divided into 4 columns. Each column is a widgetized area. You can add widgets to this area from **Appearance > Widgets**.

Or via Elementor in the Footer Tap

Output

Elementor

Introduction

requires **Elementor** to work properly. Along with Elementor, our theme is bundled with our custom plugin **Geeks Elementor** which is used to extend core Elementor widgets, add skins to existing widgets and provide new widgets.

Installation

Elementor is a free plugin available in WordPress.org repository and it is the #1 WordPress Website Builder plugin. It has over 5 million active installations. To install Elementor in your website:

1. In your admin panel, go to **Plugins > Add New**.
2. Type '**Elementor**' in the search for and press the 'Enter' key on your keyboard.
3. Click on Install and Activate **Elementor** to use Elementor.

Geeks Elementor

We've used developed **Geeks Elementor** plugin exclusively for **Geeks** Theme. It is bundled with the theme and is available for installation from **Appearance > Install Plugins**. Once you've installed this plugin, please make sure to activate the plugin. **Geeks Elementor** provides skins to existing widgets and also new widgets. And we Customized it specially to fit in the Udemy Site and works as it should.

Settings

Please Note: All these settings are automatically set when you activate **Geeks** Elementor plugin. The below screenshots are for your reference in case you wish to set these values manually.

Once you've installed and activated **Elementor Pro** and **Geeks Elementor**. You need to adjust the settings of Elementor for **Geeks** Theme. You can access Elementor Settings from **Elementor > Settings**.

Breakpoints

Layout Settings

- **Content Width – Desktop** – 1040 – Set the desktop max-width to this value.
- **Content Width – Tablet** – 720 – Set the desktop max-width to this value.
- **Content Width – Mobile** – 540 – Set the desktop max-width to this value.
- **Widget Space (px)** – 0 – Set the widget space to 0. Spacing between widgets is added by the theme through Spacing CSS classes.

Breakpoints

The screenshot shows a settings panel with a 'Layout Settings' header and a 'Breakpoints' section. The 'Breakpoints' section is expanded, showing two rows: 'Mobile' and 'Tablet'. Each row has a 'Breakpoint (px)' label and a text input field. The 'Mobile' input field contains the value '768' and the 'Tablet' input field contains the value '1025'. At the bottom of the panel is a 'Need Help ?' link.

Device	Breakpoint (px)
Mobile	768
Tablet	1025

Breakpoints

- **Mobile Breakpoint** – 768 – Set the mobile breakpoint to this value.
- **Tablet Breakpoint** – 991 – Set the table breakpoint to this value.

CSS Classes

Geeks makes use of Bootstrap's utility classes with **CSS Classes** option provided in Elementor for various purposes.

Example: Bootstrap Spacing Classes and Display Classes applied to a section in Elementor

Display

Display utility classes that apply to all breakpoints, from `xs` to `xl`, have no breakpoint abbreviation in them. This is because those classes are applied from `min-width: 0;` and up, and thus are not bound by a media query. The remaining breakpoints, however, do include a breakpoint abbreviation.

As such, the classes are named using the format:

- `.d-{value}` for `xs`
- `.d-{breakpoint}-{value}` for `sm`, `md`, `lg`, and `xl`.

Where *value* is one of:

- `none`
- `inline`
- `inline-block`
- `block`
- `table`
- `table-cell`
- `table-row`
- `flex`
- `inline-flex`

The media queries affect screen widths with the given breakpoint *or larger*. For example, `.d-lg-none` sets `display: none;` on both `lg` and `xl` screens.

Flex

Justify Content

Use `justify-content` utilities on flexbox containers to change the alignment of flex items on the main axis (the x-axis to start, y-axis if `flex-direction: column`). Choose from `start` (browser default), `end`, `center`, `between`, or `skola`.

- `.justify-content-start`
- `.justify-content-end`
- `.justify-content-center`
- `.justify-content-between`
- `.justify-content-around`
- `.justify-content-sm-start`
- `.justify-content-sm-end`
- `.justify-content-sm-center`
- `.justify-content-sm-between`

- `.justify-content-sm-around`
- `.justify-content-md-start`
- `.justify-content-md-end`
- `.justify-content-md-center`
- `.justify-content-md-between`
- `.justify-content-md-around`
- `.justify-content-lg-start`
- `.justify-content-lg-end`
- `.justify-content-lg-center`
- `.justify-content-lg-between`
- `.justify-content-lg-around`
- `.justify-content-xl-start`
- `.justify-content-xl-end`
- `.justify-content-xl-center`
- `.justify-content-xl-between`
- `.justify-content-xl-around`

Align Items

Use `align-items` utilities on flexbox containers to change the alignment of flex items on the cross axis (the y-axis to start, x-axis if `flex-direction: column`). Choose from `start`, `end`, `center`, `baseline`, or `stretch` (browser default).

- `.align-items-start`
- `.align-items-end`
- `.align-items-center`
- `.align-items-baseline`
- `.align-items-stretch`
- `.align-items-sm-start`
- `.align-items-sm-end`
- `.align-items-sm-center`
- `.align-items-sm-baseline`
- `.align-items-sm-stretch`
- `.align-items-md-start`
- `.align-items-md-end`
- `.align-items-md-center`
- `.align-items-md-baseline`
- `.align-items-md-stretch`
- `.align-items-lg-start`
- `.align-items-lg-end`
- `.align-items-lg-center`
- `.align-items-lg-baseline`
- `.align-items-lg-stretch`
- `.align-items-xl-start`
- `.align-items-xl-end`

- `.align-items-xl-center`
- `.align-items-xl-baseline`
- `.align-items-xl-stretch`

Spacing

Assign responsive-friendly `margin` or `padding` values to an element or a subset of its sides with shorthand classes. Includes support for individual properties, all properties, and vertical and horizontal properties. Classes are built from a default Sass map ranging from `.25rem` to `3rem`.

Spacing utilities that apply to all breakpoints, from `xs` to `xl`, have no breakpoint abbreviation in them. This is because those classes are applied from `min-width: 0` and up, and thus are not bound by a media query. The remaining breakpoints, however, do include a breakpoint abbreviation.

The classes are named using the format `{property}{sides}-{size}` for `xs` and `{property}{sides}-{breakpoint}-{size}` for `sm`, `md`, `lg`, and `xl`.

Where *property* is one of:

- `m` – for classes that set `margin`
- `p` – for classes that set `padding`

Where *sides* is one of:

- `t` – for classes that set `margin-top` or `padding-top`
- `b` – for classes that set `margin-bottom` or `padding-bottom`
- `l` – for classes that set `margin-left` or `padding-left`
- `r` – for classes that set `margin-right` or `padding-right`
- `x` – for classes that set both `*-left` and `*-right`
- `y` – for classes that set both `*-top` and `*-bottom`
- blank – for classes that set a `margin` or `padding` on all 4 sides of the element

Where *size* is one of:

- `0` – for classes that eliminate the `margin` or `padding` by setting it to `0`
- `1` – (by default) for classes that set the `margin` or `padding` to `$spacer * .25`
- `2` – (by default) for classes that set the `margin` or `padding` to `$spacer * .5`
- `3` – (by default) for classes that set the `margin` or `padding` to `$spacer`
- `4` – (by default) for classes that set the `margin` or `padding` to `$spacer * 1.5`
- `5` – (by default) for classes that set the `margin` or `padding` to `$spacer * 3`
- `auto` – for classes that set the `margin` to `auto`

More details here: <https://getbootstrap.com/docs/5.3/getting-started/introduction/>

Text alignment

Easily realign text to components with text alignment classes.

- `text-left` – Left aligned text on all viewport sizes.
- `text-center` – Center aligned text on all viewport sizes.
- `text-right` – Right aligned text on all viewport sizes.

- `text-sm-left` – Left aligned text on viewports sized SM (small) or wider.
- `text-md-left` – Left aligned text on viewports sized MD (medium) or wider.
- `text-lg-left` – Left aligned text on viewports sized LG (large) or wider.
- `text-xl-left` – Left aligned text on viewports sized XL (extra-large) or wider.

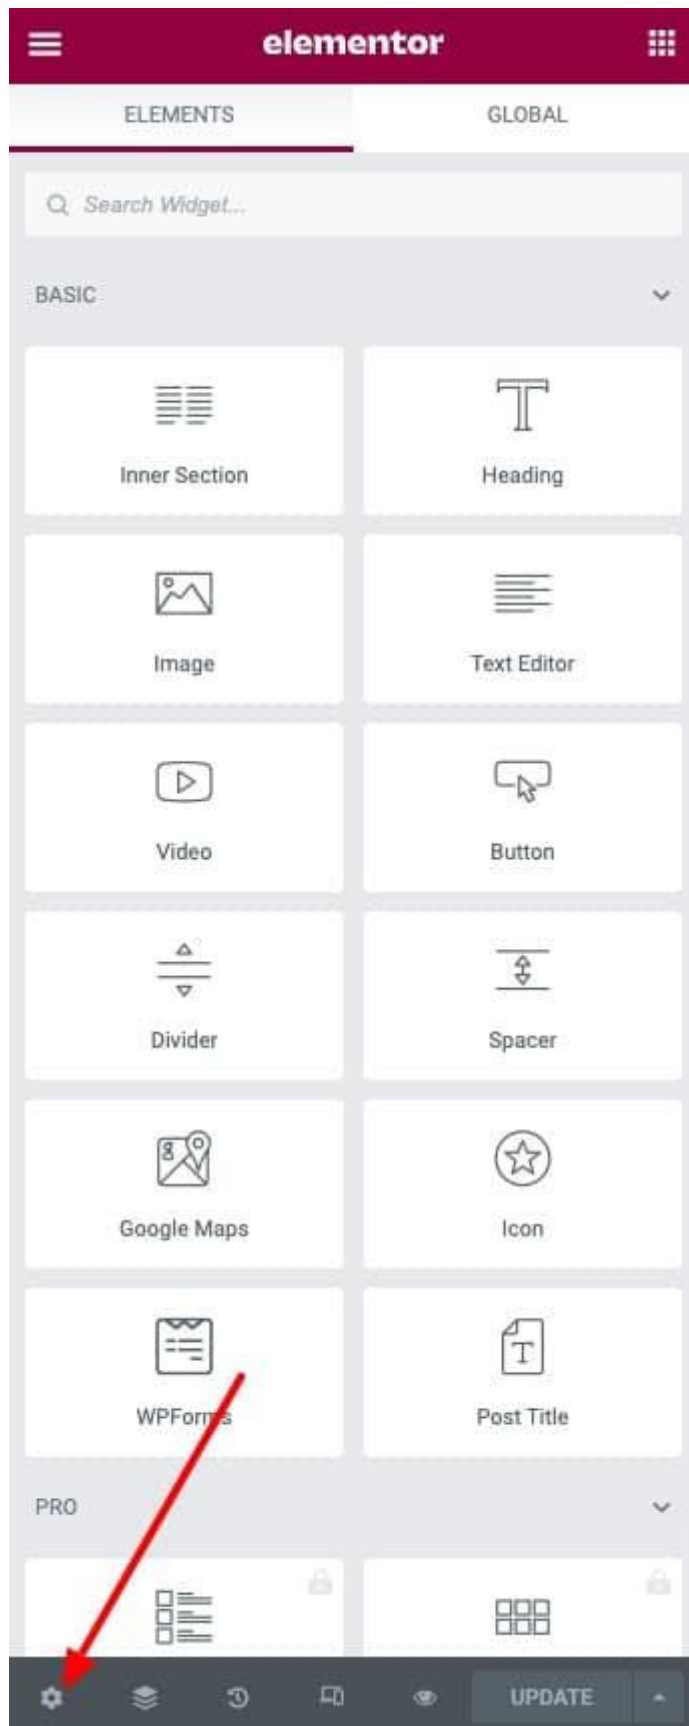

Font weight and italics

- `font-weight-bold` – Bold text.
- `font-weight-bolder` – Bolder weight text (relative to the parent element).
- `font-weight-normal` – Normal weight text.
- `font-weight-light` – Light weight text.
- `font-weight-lighter` – Lighter weight text (relative to the parent element).
- `font-italic` – Italic text.

Page Settings

Please note: You may be required to save and refresh the page for some the below settings to take effect.

We've added additional **Header/Footer** settings to **Page Settings** of **Elementor**. The Header and Footer settings panel allows you to choose a custom Header or a custom Footer for the page or custom post type that you are editing. Once enabled, the custom Header and Footer will override the default Header and Footer settings provided by **Appearance > Customize**.

Headers Page Setting

Footers Setting

The image shows a 'Page Settings' panel with three tabs: 'Settings', 'Style', and 'Advanced'. The 'Settings' tab is active. Below the tabs are sections for 'General Settings', 'Headers', and 'Footer'. The 'Footer' section is highlighted with a red border and contains the following settings:

- Custom Footer:** A toggle switch labeled 'ENABLE' that is turned on.
- Footer Variant:** A dropdown menu showing 'Footer v1'.
- Enable Footer Widgets:** A toggle switch labeled 'ENABLE' that is turned on.
- Enable Footer White Background:** A toggle switch labeled 'ENABLE' that is turned on.
- Copyright Text:** A text input field containing '© 2021 Geeks. All Right Reserved.' with a small edit icon at the bottom right.

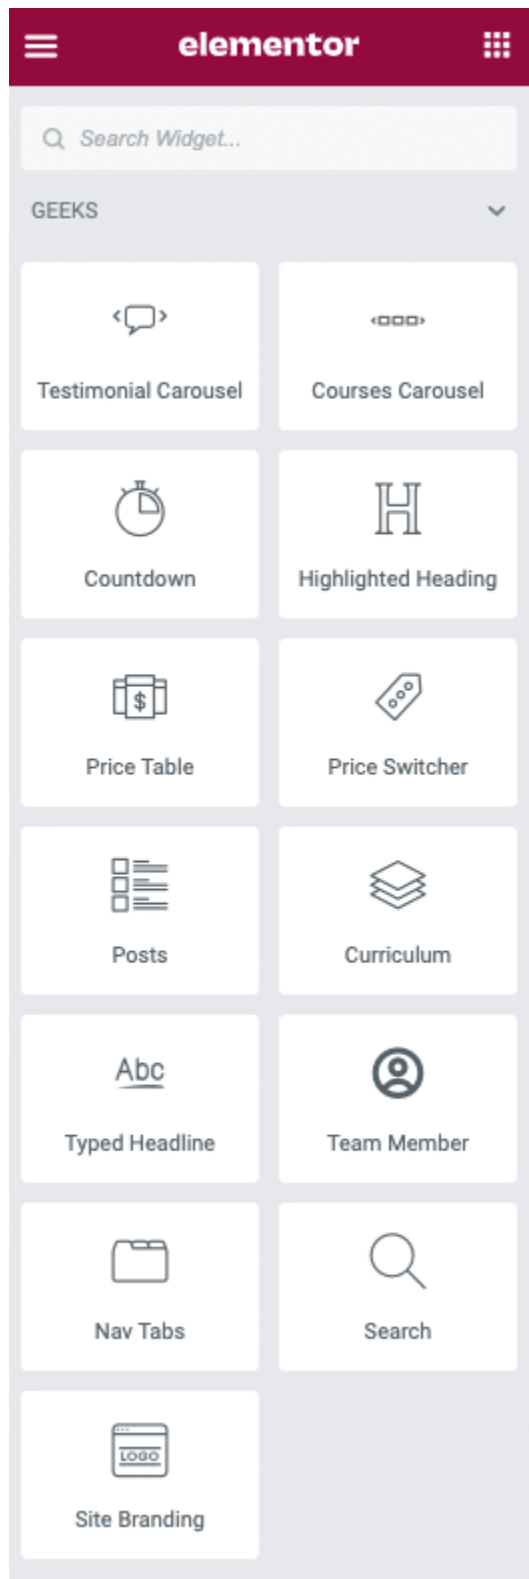

Footers Setting

Layout

In the general settings panel, we recommend **Elementor Full Width** layout. This is suitable for most of our pages. Choose **Elementor Canvas** if you do not wish to have the Header and Footer.

If you choose **Default**, then the style for that particular post type is loaded.

Widgets, Skins & Extend

Widgets

In addition to the default widgets, includes additional widgets to help us build the website.

Testimonial Carousel

Testimonial carousel is used for showing feedbacks and writing testimonials of users on your site. You are free to add any kind of proof to make reviews trustworthy like author's name, photo and logo.

Course Carousel

Course carousel is used to showcase the different courses available. It helps you display courses with details like the instructor, duration, fees and ratings.

Countdown

The countdown widget enables you to add countdown to your page. You can use for the

Highlighted Heading

This widget lets you display heading in 2 colors. It can also be used as a regular heading.

Pricing Table & Price Switcher

This widget lets you display a pricing table. The price switcher allows the pricing table to toggle between annual and monthly prices.

Posts

These widgets are used to display posts.

Team Member

This widget is designed to showcase team members. Comes in different styles.

Search

Search widget is used to display a search form in Hero blocks. It displays Blog search.

Extend

We've added additional controls to existing Elementor widgets to extend their behaviour or modify their CSS classes.

What is the difficulties we face in this project?

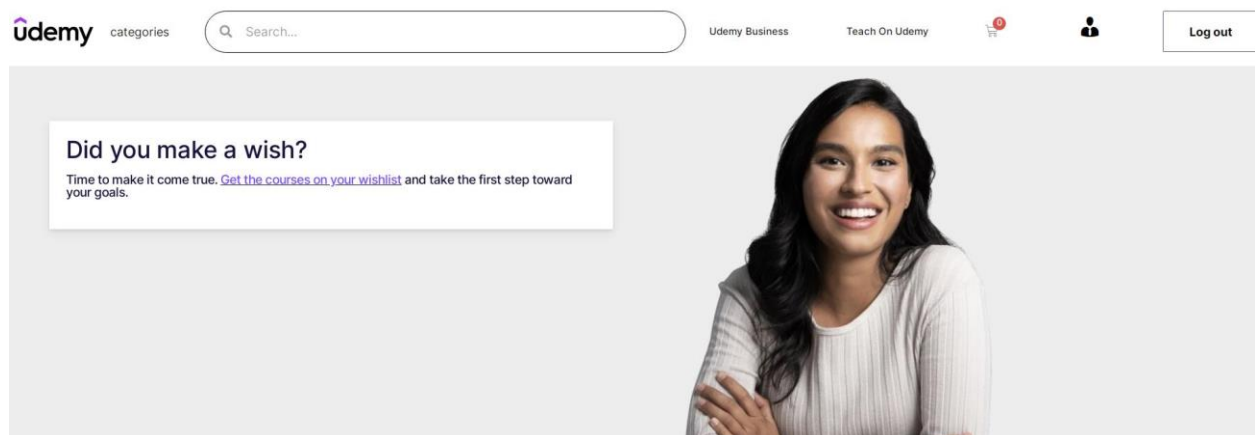

- Some elements were difficult to create.
- Some functionalities needed extra search and special plugins.
- The theme needed modifications.

Overall Screenshot

As a collaborating team we shared our knowledge from creating meeting and working in the same time to individual tasks to make sure to get the final product of this website to the best condition

we try as much as we could to simulate udemy website. this is the Result of what we could come for.

Mark as Complete ✕

Lesson

Business to business (B2B) sales are **transactions between two businesses rather than between a business and an individual consumer for the consumer's personal use**. B2B sales are characterized by larger transaction amounts, more educated buyers, a multistakeholder approval process and thus, **larger sales cycle**.
